

Activities of the Gifu Prefectural Research Institute for Forest

1128-1 Sodai, Mino-shi, Gifu 501-3714

Tel : 0575-33-2585, E-mail: info@forest.rd.pref.gifu.jp

URL <https://www.forest.rd.pref.gifu.lg.jp>

Research and development for supporting “promotion of sound and rich forests” and “revitalization of forestry and wood industry”

Dissemination of research results, etc.

Research on forest management technology

Development of low-cost and reliable Reforest and nursery technology

Update 4 years after felling

Development of the technology for updating information after felling of trees

Research on technologies for raising seeds and seedlings

Development of the technology for container seedling production

Development of cultivation technology to improve the quality of paper mulberry

Research on prevention of forest damage by diseases, animals, and pests

Development of technology to prevent deer feeding damage

Hinoki (Japanese cypress) affected by root and butt rot disease

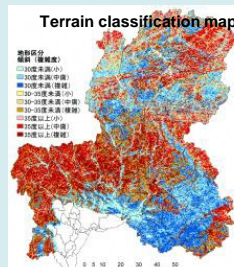

Development of technologies for preventing tree diseases and damages

Research on production and use of forest resources

Simplified penetration test

Development of the technology for opening study and low-cost strip roads

Terrain classification map

Development of various forest information maps

Research for expanding the use of woods produced in the prefecture

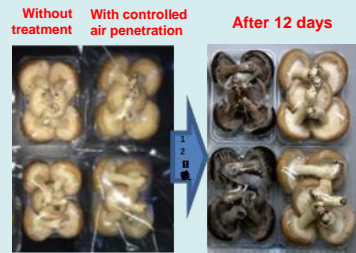

High temperature steam-type wood dryer

Development of the drying technology for quality improvement

Development of technologies processing and using large-diameter Sugi (Japanese cedar) logs

Research on mushroom production

Development of the technology for preservation of quality of edible shiitake mushrooms

Development of the yield technology for cultivation of edible mushroom

Dissemination of research results

Dissemination of research results

Technological support/raising awareness

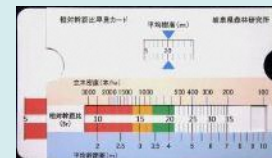

Training for development of forest practice planners

Research presentation

Brochures summarizing research results

Relative spacing ratio quick card
